

1886 Original Copper

Today's Patina Copper

**Your Pure Copper Coated Arms  
Will Patina and Change Color**

**Statement from the NIH**

The surfaces of copper are antimicrobial. They have an inherent ability to kill a wide range of harmful microbes relatively rapidly – often within two hours or less.

**Statement from the EPA**

The study of the antimicrobial properties of metallic gained momentum when the Environmental Protection Agency (EPA) registered almost 300 different copper surfaces as antimicrobial in 2008.
